

# VIRTUALIZATION & WEB SERVICES

are key enablers of

enables  
service  
interaction

## WEB SERVICES

Enable communication  
and interoperability  
over the internet

## SOAP / REST APIs

## PROVIDER

(Service Exposer)

## CONSUMER

(Service Requestor)

## SERVICE DISCOVERY

Find and access  
services  
dynamically

## CLOUD COMPUTING

Servers

### TOGETHER THEY ENABLE

- On-demand provisioning
- Elasticity & Scalability
- Efficient resource utilization
- Service reusability
- Agility & Flexibility

## RESULT

SCALABLE, FLEXIBLE &

## VIRTUALIZATION

Creates an abstraction  
of physical resources

## HYPERVERSOR

(Virtual Machine Monitor)

Manages and allocates  
hardware resources

## VIRTUAL MACHINES

## RESOURCE ABSTRACTION

CPU, Memory,  
Storage, Network  
are abstracted

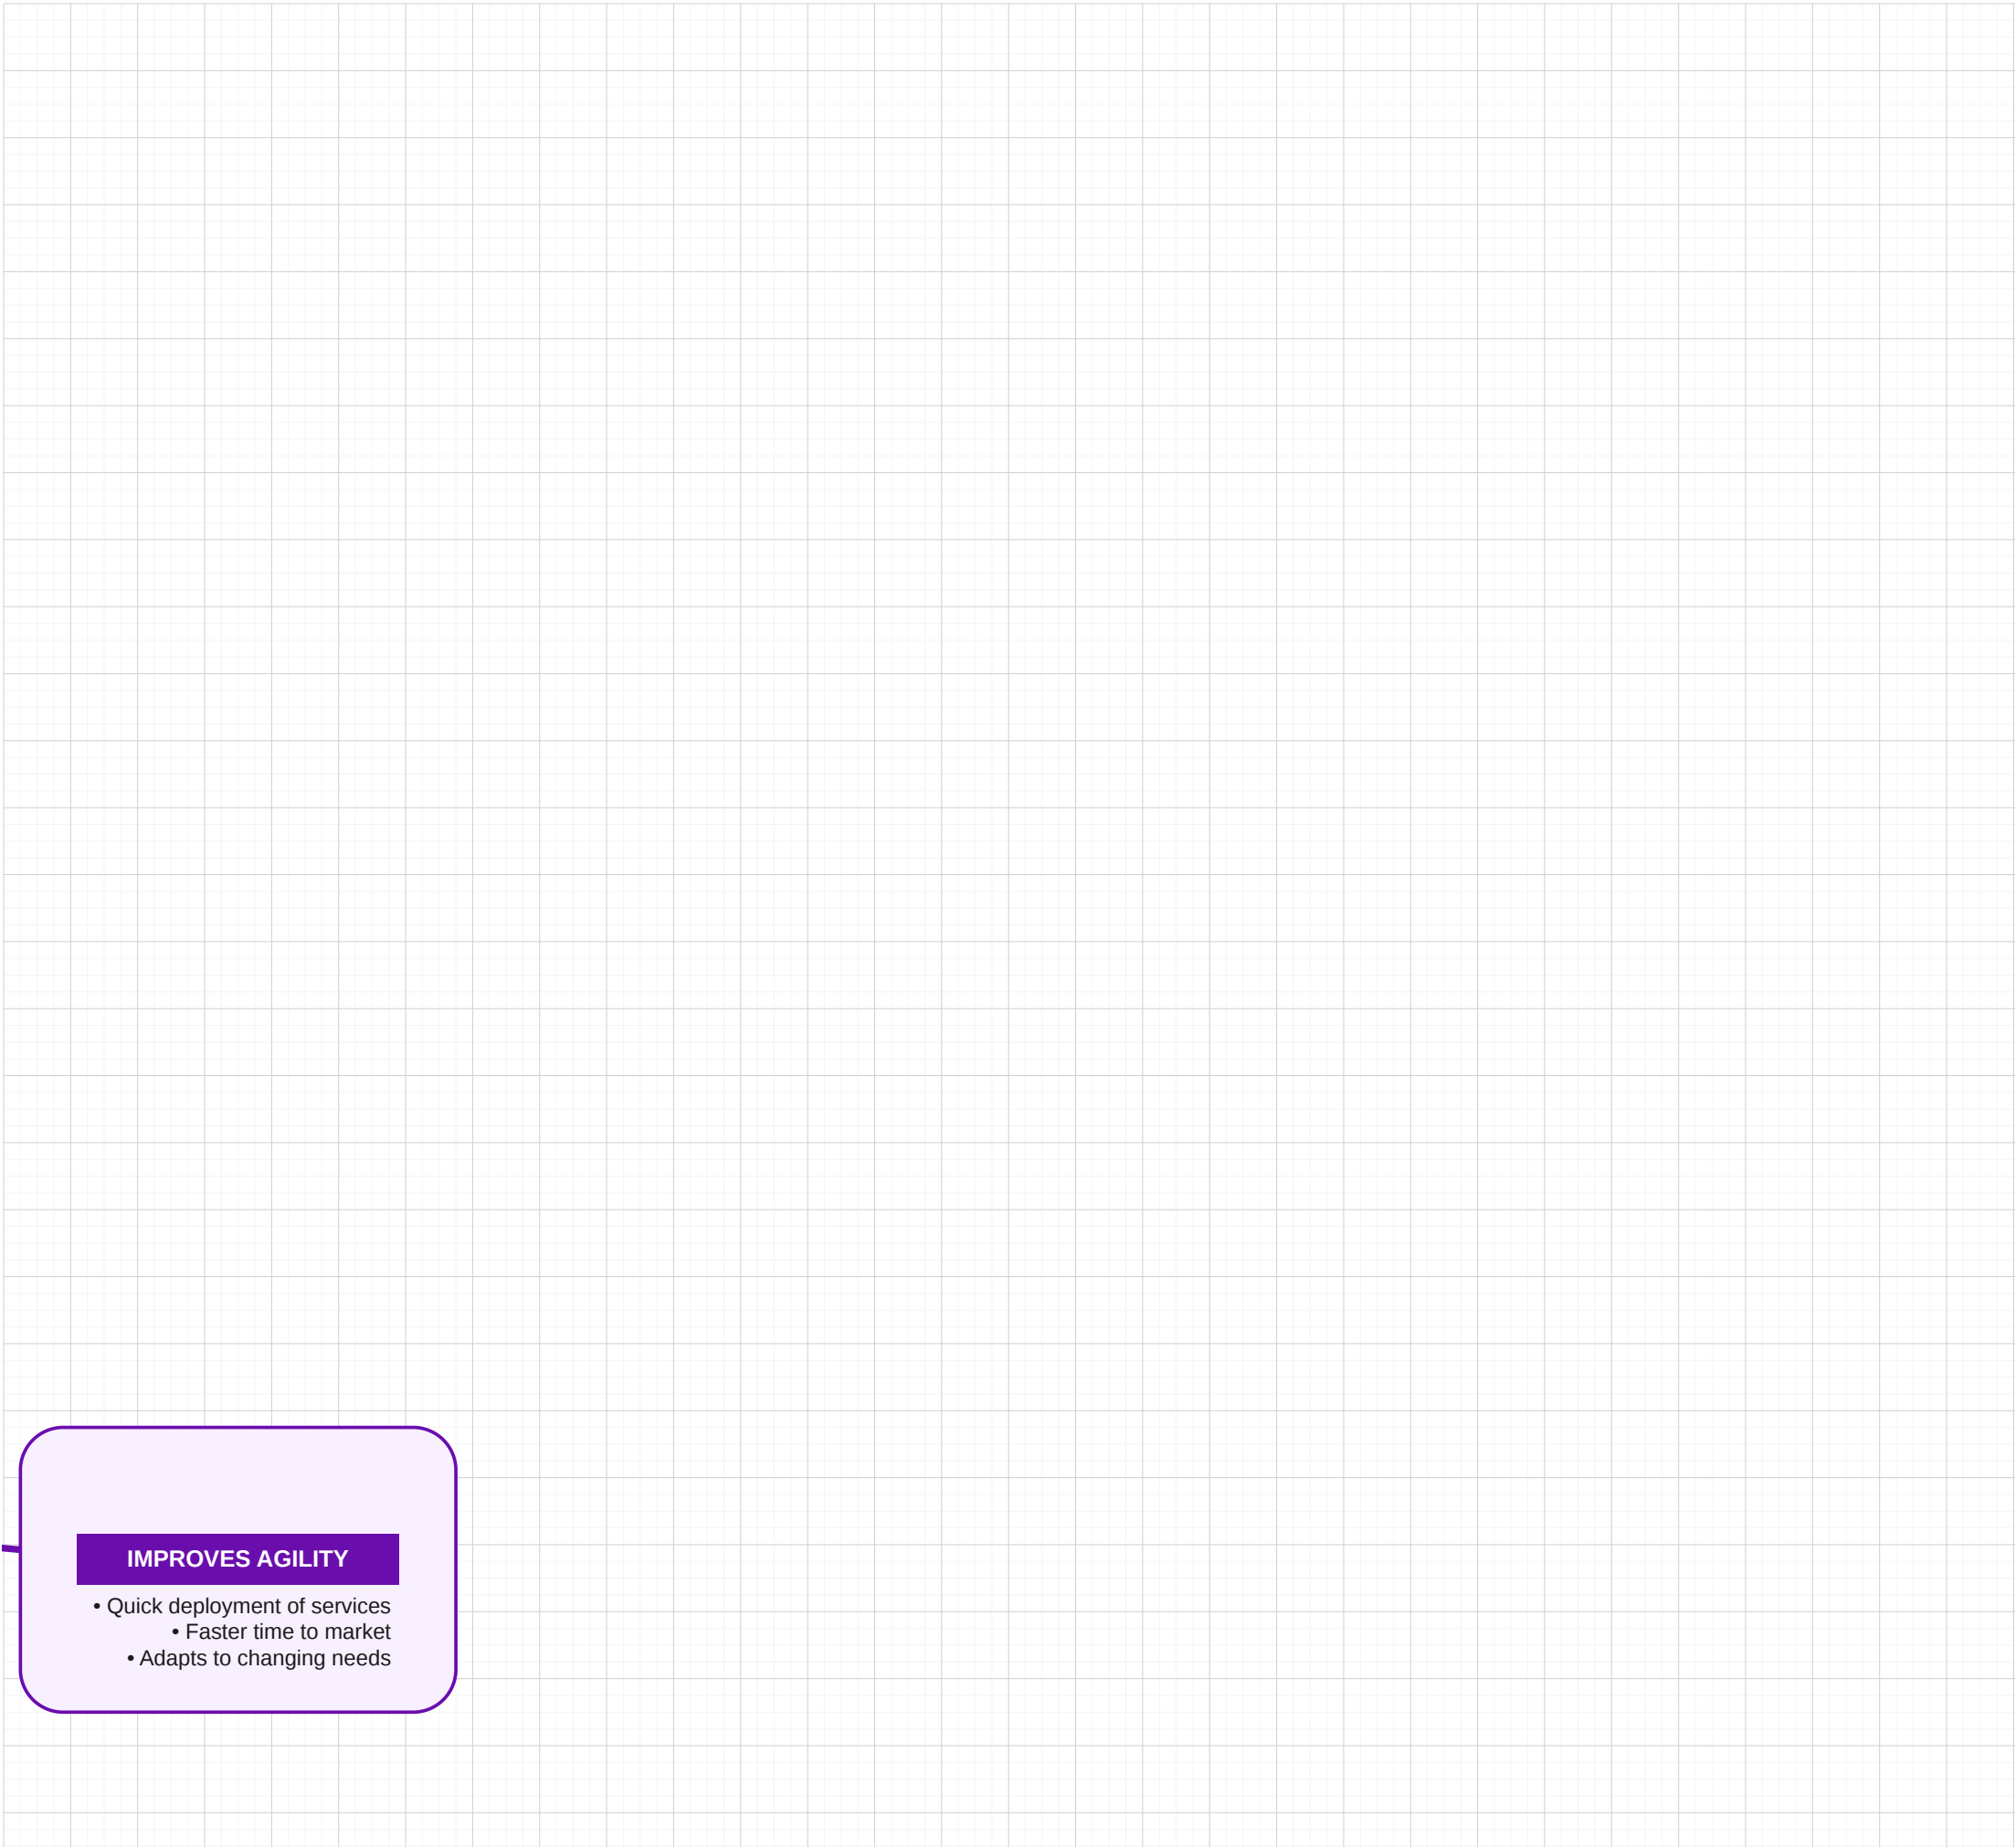

## RESOURCE POOLING

Resources are pooled  
and shared efficiently

## SUPPORTS SCALABILITY

- Add more VMs
- Handle more load
- Scale up / down easily

provides  
infrastructure  
flexibility

**IMPROVES AGILITY**

- Quick deployment of services
  - Faster time to market
- Adapts to changing needs
